DETAILED ACTION

Allowable Subject Matter

Claims 1-16 are allowed over the prior art of record because the prior art fails to teach either singly or in combination a controller configured to control the control voltage applied to said at least one electrode such that an area of said charge storage in one of two different phase period of said modulation signal is different from the area of said charge storage in an other phase period of said modulation signal, a charge ejector configured to output the electric charges collected in said charge storage, and an evaluator configured to evaluate the target space according to a difference between the electric charges collected in the one of said two different phase periods by said charge storage formed in one of said at least two photoelectric converters, and the electric charges collected in the other phases period by said charge storage formed in the other one of said at least two photoelectric converters, wherein said at least two photoelectric converters receive light from the target space into which a flashing light is being irradiated, and said evaluator evaluates the target space in accordance with a difference between electric charges collected in a lighting period of said flashing light by said charge storage formed in one of said at least two photoelectric converters, and electric charges collected in a non-lighting periods of said flashing light by said charge storage formed in the other one of said photoelectric converters regarding claim (1); a charge ejector configured to output the electric charges from the charge storage, and a microcomputer comprising a control circuit and an evaluator, said control circuit being configured to generate each control voltage, to adjust a ratio of the electric charges

Art Unit: 2878

collected in the charge storage, to adjust a timing of forming the charge storage, and to adjust a timing of outputting the electric charges from the charge ejector, said evaluator being configured to detect spatial information from the target space, wherein said evaluator is configured to evaluate the target space by use of a difference between the electric charges collected in a lighting period of said flashing light by said charge storage formed in a first photoelectric converter, and the electric charges collected in a non-lighting period of said flashing light by said charge storage formed in a second photoelectric converter regarding claim (16).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
